2. In-depth Exploration:

2.1 Is there a growing trend on e-commerce in Brazil? How can we describe a complete scenario? Can we see some seasonality with peaks at specific months?

Code :

```
select
extract(month from order_purchase_timestamp) as order_month,
extract(year from order_purchase_timestamp) as order_year,
count(order_id) as count_orders
from `Target_files.orders`
group by order_month, order_year
order by order_month, order_year
```

Query results [SAVE RESULTS](#) [EXPLORE DATA](#) [×](#) [×](#)

Results per page: 50 1 - 25 of 25 [←](#) [<](#) [>](#) [→](#)

Analysis : Following are the orders given in every month (UP). Following are the orders with order by count_orders desc (DOWN). As we can notice order count is more in November, January, March. These are the peak seasons since most of the Brazilian festivals like Carnival, Bonfim Stairs Washing happens around these months.

2.2 What time do Brazilian customers tend to buy (Dawn, Morning, Afternoon or Night)?

Analysis : Most sales are done in Afternoon.

Code :

```
select
time_stamp, count(time_stamp) as total_orders
from
(select
extract(hour from order_purchase_timestamp) as purchase_duration,
case
when extract(hour from order_purchase_timestamp) between 5 and 12 then 'Morning'
when extract(hour from order_purchase_timestamp) between 13 and 17 then 'Afternoon'
when extract(hour from order_purchase_timestamp) between 18 and 21 then 'Evening'
when extract(hour from order_purchase_timestamp) between 22 and 4 then 'Night'
else 'Dawn'
end as time_stamp

4. Impact on Economy: Analyze the money movement by e-commerce by looking at order prices, freight and others.

4.1 Get % increase in cost of orders from 2017 to 2018 (include months between Jan to Aug only) - You can use “payment_value” column in payments table

Code :

```
select
round(((ty_sales - ly_sales)/(ly_sales))*100.0) as Percentage_Increase
from(
select
sum(case when year = 2018 and month between 1 and 8 then payment_value end) as ty_sales,
sum(case when year = 2017 and month between 1 and 8 then payment_value end) as ly_sales
from
(
select
extract(month from o.order_purchase_timestamp) as Month,
extract(year from o.order_purchase_timestamp) as Year,
p.payment_value
from `Target_files.orders` o
join `Target_files.payments` p
on o.order_id = p.order_id))
```

Query results

JOB INFORMATION		RESULTS	JSON	EXECU
Row	Percentage_Increase			
1	137.0			

4.2 Mean & Sum of price and freight value by customer state

Code :

```
select
customer_state,
sum(oi.price) as price_sum,
avg(oi.freight_value) as freight_avg,
sum(oi.freight_value) as freight_sum,
avg(oi.price) as price_avg
from `Target_files.customers` c
join `Target_files.orders` o
on o.customer_id = c.customer_id
```

```
join `Target_files.order_items` oi
on o.order_id = oi.order_id
group by customer_state
```

Key Points:

1. Credit Card is used by most customers in terms of payment methods.
2. Highest no. of customers order in Afternoon
3. 'RR' Customer State has the highest average freight value in comparison to their delivery rate
4. Customer give maximum count of orders with less payment installments
5. Order count is more in November, January, March. These are the peak seasons since most of the Brazilian festivals like Carnival, Bonfim Stairs Washing happens around these months.
6. States like 'RJ', 'DF' and 'RS' have an average freight value but the time to delivery and the difference between estimated delivery time are the same. (Order is getting delivered on time)

Row	customer_state	avg_freight_valu	avg_time_to_deji	avg_diff_estimat
7	RJ	20.9609239...	14.6893821...	14.2255054...
8	DF	21.0413549...	12.5014861...	12.2199575...
9	RS	21.7358043...	14.7082993...	14.4588292...

7. Sales drastically increased from 2018 to 2017 if calculated for the data between January to August for every year

Row	Percentage_Increase
1	137.0

8. More than 90% of products were getting delivered before the estimated date since on comparison their estimated date is more than the delivery date.
